VBR11e-UAI

ABB Ability™ Symphony® Plus Hardware Selector

The VBR11e-UAI the mounting base is for AI16e, Universal Analog Input modules. The base includes a built-in RTD that can be used for Cold Junction Compensation.

Four (4) 12-point headers on the base provide connections to (4) pluggable 12-point 3.81 mm terminal blocks for direct connection of field signal wires. SPK0x_-yy marshaling cables can be used when the field signal wires are terminated on third-party hardware.

Features and benefits

- Termination for up to sixteen (16) analog I/O process signals within a vertical column.
- All SD & SDe Series I/O modules & bases of all types (Singular or Redundant) are 100 % fully compatible with each other. Thus, singular and redundant, Compact, or Full-size I/O modules can be mounted within a single, common HN800 I/O bus.
- Optional mechanical keying can be implemented to prevent insertion of the wrong I/O module type.
- Latching device on the base locks the base into position on DIN-Rail.
- Industry standard 35-mm DIN rail, Horizontal row mounting.
