

# AD11e

## ABB Ability™ Symphony® Plus Hardware Selector

The AD11e Analog Drive module processes up to sixteen (16) mixed-type field signals. The AD11e provides 4x AI, 4x AO, 4x DI, and 4x DO signals.

FC 221 (I/O Device Definition) sets AD11e module operating parameters and each I/O channel is configured using FC 222 for Analog Inputs, FC223 for Analog Outputs, FC224 for Digital Inputs, and FC225 for Digital Outputs.

The analog I/O channels are 1x8 group isolated and support HART. The digital I/O channels provide CH-2-CH isolation, and the digital inputs support SOE (Sequence of Events).

The digital outputs of the AD11e module are open-collector transistor type, 24-48 VDC outputs capable of handling up to 250 mA.
